DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/1/04 has been entered.

Amendment Entry

2. Applicant's amendment and argument filed 3/1/04 is acknowledged and has been entered. Claims 5, 6, and 15 have been cancelled. Claims 1, 2, and 11-14 have been amended. Claims 16-18 have been added. Accordingly, claims 1-4, 7-14, and 16-18 are pending.

A restriction requirement has been set forth in light of the newly submitted claims in addition to the claims currently pending of record, which are deemed to encompass two groups of inventions.

Election/Restrictions

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, 7-14, and 18, drawn to method of classifying leucocytes using antibodies specific for three groups of leucocytes, classified in class 435, subclass 7.24, for example.
- II. Claims 16 and 17, drawn to drawn to method of classifying leucocytes using antibodies specific to defined cell surface antigens, classified in class 436, subclass 517, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require antibodies specific for CD16, CD11b, CD66b, and CD66c. The subcombination has separate utility such as applicability in cell enrichment methods requiring degrees of positive or negative selection of immature leucocytic cell lines.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Furthermore, because the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper. Literature search for each method is distinct since the structural and functional requirements of each invention are different. While searches would be expected to overlap, there is no reason to expect the searches to be coextensive.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
